

- ### Projects View
- Displays all projects
 - Name
 - Description
 - Created / modified
 - profile pic

- ### Project View / Summary
- View project summary info:
 - counts
 - content
 - annotated
 - model versions
 - created / updated
 - Allows for uploading data to the project

- ### Annotation / Tag View
- Displays Annotation stats
 - Annotated vs . non-annotated content
 - Annotated specific
 - Human vs. machine
 - Uncertainty info (applies to machine annotated)
 - Model version (applies to machine annotated)
 - Annotation categories
 - Provides workflow for annotating content
 - Option to pull data randomly
 - Option to pull data with high uncertainty
 - Uncertain data only available after a model has been created and applied to the project
 - Annotated data automatically sent to dataset

- ### Dataset View
- View content in dataset (annotated data)
 - Configure split of data (i.e. train, validation, and test)
 - Add more data to dataset (routes back to upload stage)
 - Send Dataset to training i.e. create new model with:
 - Name
 - Description
 - created / training started

- ### Models View
- Displays all models
 - name
 - description
 - version
 - created

- ### Model View
- View model details
 - name
 - description
 - model stats
 - created / training started / training ended
 - snapshot of dataset
 - Annotations used
 - Specific data tied to the model
 - Split of data
 - Testing models
 - Test against validation / test set
 - Test with sample from project data (un-annotated)
 - Deploy models
 - Inference URL (Curl endpoint)
 - Apply to project data (un-annotated)
